

ALLAN PAULRAJ V

Computer Science & Engineering (AI & ML) · Karunya Institute of Technology and Sciences
Coimbatore, India · +91 6374185190 · allanpaulraj2020@gmail.com · [LinkedIn](#) · [GitHub](#) · [Portfolio](#)

PROFESSIONAL SUMMARY

Motivated Computer Science undergraduate specialising in Artificial Intelligence & Machine Learning, with a strong portfolio of independently built full-stack and AI-powered applications. Proven ability to take projects from zero to deployment — from real-time systems with complex business logic to deep learning pipelines for medical imaging. Actively pursuing opportunities to apply AI, backend, and full-stack skills to create measurable impact.

EDUCATION

Karunya Institute of Technology and Sciences

2024 – 2028

B.Tech — Computer Science & Engineering (AI & ML) | Coimbatore, India

CGPA: 7.0 | Latest SGPA: 7.54 | Specialised Courses: Artificial Intelligence & Machine Learning

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, C, SQL

Frontend: React, Vite, HTML5, CSS3, Tailwind CSS, Vanilla JS, Pure SVG Charts

Backend & Databases: Node.js, Express, FastAPI, SQLite, MongoDB

AI / ML: TensorFlow, EfficientNetB0, Groq API (Llama 3.3 70B), Mistral LLM, Ollama, Prompt Engineering

Tools & Platforms: Git, GitHub, Vercel, Chart.js, MS Excel, Tkinter

PROJECTS

NeuroAI — Brain MRI Tumor Classification & Diagnostic Report Generator [GitHub](#)

2025

- Engineered a full-stack AI web application that classifies brain MRI scans into 4 categories — Glioma, Meningioma, Pituitary Tumor, and No Tumor — using a fine-tuned EfficientNetB0 CNN with a 224×224 preprocessing pipeline.
- Implemented two-phase transfer learning with class-imbalance handling via weighted training; model returns confidence scores for all tumor classes in seconds.
- Integrated Mistral LLM via Ollama to auto-generate structured, 5-section patient-friendly diagnostic reports directly from classification output.

Tech: TensorFlow · EfficientNetB0 · FastAPI · React · Mistral LLM · Ollama · Python

Body Blueprint Pro — AI-Powered Fitness Web Application [GitHub](#) | [Live Demo](#)

2025

- Built a React + Vite fitness app that generates personalised workout & nutrition plans, tracks body measurements across 14+ body parts, and monitors weight transformation over time.
- Developed interactive dashboard with BMI/TDEE/macro analytics, AI contest prep planner for competitive bodybuilders, and an AI fitness coach powered by Groq's Llama 3.3 70B via a Node.js proxy.
- Engineered all data-visualisation charts from scratch in pure SVG — no charting libraries — demonstrating deep understanding of browser rendering and DOM manipulation.

Tech: React · Vite · Node.js · Groq API · Llama 3.3 70B · Vercel · Pure SVG Charts

SmartPark — Real-Time Parking Management System [GitHub](#)

2025

- Designed a full-stack parking operations platform for a multi-floor facility — handling vehicle entry/exit, real-time spot assignment across 3 floors, and complete GST-compliant billing.
- Implemented smart peak-hour dynamic pricing (auto-switching 8–10am & 5–8pm) with per-hour billing, printable receipts with 18% GST breakdown, and overstay detection alerts for vehicles parked 10+ hours.
- Built a revenue dashboard with 7-day bar charts, 4-vehicle-type breakdown (Bikes, Cars, Trucks, Buses), plate number search, activity log, and CSV export.

Tech: Node.js · Express · SQLite · Vanilla JS · Tailwind CSS · Chart.js

Personal Portfolio Website [allanrj.vercel.app](#) | [GitHub](#)

2025

- Designed and deployed a personal portfolio from scratch; debugged real-world production issues including 404 errors, misconfigured build paths, and Vercel root directory configuration.
- Gained end-to-end experience with the full deployment pipeline: local development → GitHub version control → live production URL.

Tech: HTML · CSS · JavaScript · GitHub · Vercel

INTERNSHIPS

Fuzionest Private Limited — *Software Developer Intern*

Jun – Aug 2025

- Analysed and managed company sales datasets using Microsoft Excel; identified statistical outliers in sales data and presented findings directly to the CEO for strategic decision-making.
- Received official certificate of completion upon successfully finishing the internship.

Lysa Solutions — *Full Stack Developer Intern*

Jun – Aug 2026

- Engineered backend logic, deployed responsive components, and maintained collaborative on-site codebases during a 3-month offline deployment in Coimbatore.
- Worked across the full stack — building server-side APIs and client-facing interfaces under active project deadlines in a professional on-site environment.

Oasis Infobyte — *Data Science Intern*

Jun 2026

- Fellowship-based data science internship focused on hands-on application of data analysis and machine learning concepts in an industrial setting.
- Applied Python-based ML pipelines to real-world datasets, reinforcing practical skills in model building, evaluation, and interpretation.

LEADERSHIP & ACHIEVEMENTS

GDG On Campus Karunya — *Media & Content Production Lead*

2025 – Present

- Appointed to lead media and communications for the Google Developer Group on Campus chapter at Karunya Institute of Technology and Sciences.

Runners-Up — Mindkraft 26, Switch & Glitch IoT Event

2026

- Secured 2nd place at the inter-departmental Mindkraft 26 tech fest, representing the AIML department in an IoT-based competitive challenge conducted by the ECE department.

Winner (×2) — Mindkraft 25 · TUF Brothers & Shooting Stars

2025

- Won two separate events at Mindkraft 2025, demonstrating consistent competitive performance across non-technical and creative disciplines.

CERTIFICATIONS & COURSES

- CS205: Building with Artificial Intelligence — Saylor Academy | Grade: 94.12 | 48 hrs | June 2025
- CS260: Introduction to Cryptography & Network Security — Saylor Academy | 48 hrs | June 2025
- Introduction to Generative AI — Google | LLMs, Prompt Engineering, Responsible AI
- AI Agents with MongoDB — MongoDB | Building & scaling intelligent AI agents
- DBMS — Master the Fundamentals & Advanced Concepts — Scaler Topics | 16 modules, 74 tutorials | SQL, Normalization, ACID, Indexing
- Java — Mastering the Fundamentals — OOP, Collections, Exception Handling, File I/O
- C Programming — Cisco Networking Academy
- Python Programming — Cisco Networking Academy
